AAC Target Phrase Data Sheet

AAC modeling, also known as Aided Language Stimulation, is an interactive process between an individual using AAC and their communication partner. As the communication partner, you can offer AAC modeling by pointing to icons, words, or letters on an individual's communication device while speaking. For example, while saying "I like that" you could point to an icon representing *like*. By using AAC while you talk, you are providing the individual with very important models of how to use their system to communicate appropriately and effectively. Because all people do not use AAC, this modeling really helps the individual learning to use AAC. Here are some suggest phrases you can both work on. Make a note about whether or not you modeled the phrase, or the individual used the phrase with (*prompted*) or without (*unprompted*/independent) your help.

Target Phrase	Symbol Sequence	Support Provided (color in the appropriate square to chart whether or not you modeled the phrase or the individual generated the phrase with or without prompting)											
Make it go fast		Unprompted											
		Prompted											
		Modeled											
I want more		Unprompted											
		Prompted											
		Modeled											
Put it on		Unprompted											
		Prompted											
		Modeled											
Pick it up		Unprompted											
		Prompted											
		Modeled											
Can I stop it?		Unprompted											
		Prompted											
		Modeled											
Can it go fast?		Unprompted											
		Prompted											
		Modeled											
Don't want it		Unprompted											
		Prompted											
		Modeled											
Go on train		Unprompted											
		Prompted											
		Modeled
